Dahlia Fertilizer

To those who wish to grow the finest dahlias, we suggest the following directions which we have found in our own trial ground to produce results which are nothing less than wonderful:

AT PLANTING TIME—5 pounds Raw Bone Meal, 1 pound Muriate of Potash and 5 pounds of Wizard Sheep Manure. Mix thoroughly and apply at the rate of 1 pound to each hill working the fertilizer well into the soil. No fertilizer should come in direct contact with tubers.

AUGUST TOP DRESSING—1½ pounds Bone Meal (preferably steamed bone as it is quicker in acting), 4 pounds Wizard Sheep Manure and ½ pound Muriate of Potash. Mix and then scatter around plants, keeping at least 8 inches away from stalk. Cultivate top soil continually but not deeply. Water thoroughly and frequently.

Hardy Perennial Plants

Due to the highly perishable nature of live plants, it is not practical to carry this stock at our retail store during the entire season. Orders should be placed in our hands at least ten days before the anticipated time of planting. We can supply most of the well-known varieties of Hardy Plants and also many rare sorts. Dwarf Plants for the Rock Garden are given special attention and we will gladly assist in making up collections for this purpose.
